

Logan Aluminum, Inc.

Air Emissions Management Plan

6920 Lewisburg Rd, Russellville, Ky 42276

Quantification & Disclosure of Material Emissions

- In accordance with the requirements of Logan Aluminum's Title V air permit and Toxic Release Inventory reporting requirements, Logan will measure monitor and report material emissions to air.
- Logan will periodically audit monitoring and reporting to qualify and validate emissions reporting.
- Air emissions are reported and disclosed to the public in accordance with legal requirements (40 CFR Part 60, CERCLA section 313).

Minimization & Impact Mitigation

- Logan Aluminum will adopt air pollution control technologies that meet or exceed the legal requirements for air pollution control.
- Logan will Implement operational controls to minimize employee and community exposure to air pollutants.

Regular Plan Reviews

- Conduct a full EMP review every year to incorporate best practices and regulatory changes.
- Initiate immediate incident reviews after:
 - I. Any air emissions exceedance event beyond permitted limits.
 - II. Any process change that alters material risks (e.g., expansion, new facilities, or new regulations).

Public Disclosure of Plans

- The latest version of the Air Emissions Management Plan is publicly available through corporate reports, or Logan's external website.
